Our award winning authentication solution, with a long track record, and proven ability, to provide a varied and dynamic solution to your authentication needs. Trusted by leading global organisations to protect their virtual perimeter. Sentry takes authentication beyond a simple OTC challenge, and uses adaptive authentication to decide if and how a user should be authenticated.

Business Benefits:

Cost Effective
Our customers love the savings afforded by the seamless integration and utilisation of existing infrastructure. In addition, our automated processes, for account management and self-help, significantly reduce IT management time and costs.

Productivity Gains
A range of static and dynamic risk-based authentication capabilities ensure user experience is optimised without compromising the enterprise. Apply the right level of authentication based on a range of factors including: who the user is, the service the user is trying to access and the IP address they are using; so your business can always run at maximum efficiency.

Easy Secure Access
To simplify administration and your users' lives, Sentry provides a seamless and unified approach to authentication. Using our login portal, all authentication requests can be routed and controlled via our Unified Login Page based on risk policies that you define.

Maximum Security
Our intelligent, adaptive authentication approach works by combining our tried and tested authentication software, with a large array of authentication options; a risk and rules based policy engine working in tandem with the Unified Login Page to ensure access to your data remains safe.

Highly Flexible
Our award winning range of intelligent authentication solutions can be tailored to suit your business needs and budget, and all under one license. Whatever you need to access securely and whatever devices you want to use, we can make it happen – securely and seamlessly, with our mix and match authentication options.

Key Features:

Authentication Factors
A wide choice of 2FA options is available for authentication: Mobile Apps, SMS, Hardware Tokens, Voice and Desktop Client. We also provide Strong Authentication using our Image based service.

Versatile
The only solution on the market with support for both full 2FA and Strong Image based authentication options to support the widest range of business use cases.

PINsafe
Our patented process for securely encrypting a 2FA challenge when delivered via SMS or in a Web Browser.

OneTouch PUSH
Support for modern authentication methods on mobile devices. PUSH based authentication is a tried and tested alternative to manually typing in an OTC.

Simplified Administration
Automated processes for account management and self-help functions saving help-desk time.

Unified Login
The Unified Login Page allows a risk profile to be built and applied to any user and service that an enterprise wishes to offer. The centralised control of the login page allows easy rollout of authentication. It is a simple way to control how an application is accessed, the type of authentication challenge to be applied and whether a user should have access based on various location based factors.

24/7 Support
Various support options are available; 9-5 GMT and the option of 24*7*365.

Swivel Secure is a pioneering network security solutions provider. Our authentication platform is recognised as a leading standard in authentication technology and is the solution of choice for prominent global organisations.

Offering a wide range of authentication options, the Swivel Secure platform delivers two-factor authentication via Mobile Apps, SMS, OATH Tokens, Telephony and Strong authentication through integrated in-browser imagery.
