

Our award winning authentication solution protects access to all of your data whether on-premise or in the Cloud. Using Image based challenges allows us to leverage a web browser as the authentication factor; helping us, to help you solve business challenges relating to the security of, and access to, your data.

Business Benefits:

Strong Authentication

Provides enhanced security, over username and password alone, by creating a changing credential, without deploying a two-factor authentication challenge.

Reduced Costs

With no physical or soft token to manage, the total cost of ownership and management of the Image based service is lower than any comparable full 2FA service.

Simple Management

With no SMS to send, app to download, or token to provide, the image based solution is the fastest and simplest authentication factor on the market to deploy and use.

Ease of Use

Presenting the image in the users web browser, whether accessing an SSL VPN, Cloud application or internal application, means there is no 2nd device needed. Access could not be simpler, whilst security is greatly enhanced over using static credentials of a Username and Password.

Key Features:

Support for all Browsers

The image based challenge works across all browsers and by default is provided over secure HTTPS connections.

Multiple Methods

The image challenge is available as a grid of numbers (PINpad), or a rectangular image (TURing). Each time the images are presented the challenge is changed, by displaying the characters in a different order, altering the font or changing the background image.

PINsafe Security

Is used to allow the presentation of an OTC, via a web browser, using our patented protocol. PINsafe combines the use of a registered PIN with a random security string.

PINpad

A 10-digit code is presented in the form of a number grid in the user's web browser. The user then simply clicks on the images that represent their PIN. Each image clicked then transmits a different OTC code to AuthControl Sentry to authenticate the user.

Branding

Can be modified to reflect your corporate image. PINpad icons, and TURing image can be tailored to the colours of your choice.

TURing

A 10-digit code is presented in the form of a rectangular image in the user's web browser. The user then takes from it the numbers represented by their PIN. If their PIN is 1370, then they simply take the 1st, 3rd, 7th, and 10th character from the presented image.

PINsafe

TURing

Swivel Secure is a pioneering network security solutions provider. Our authentication platform is recognised as a leading standard in authentication technology and is the solution of choice for prominent global organisations.

Offering a wide range of authentication options, the Swivel Secure platform delivers two-factor authentication via Mobile Apps, SMS, OATH Tokens, Telephony and Strong authentication through integrated in-browser imagery.
