Our award winning authentication solution protects access to all of your data whether on-premise or in the Cloud. Using modern authentication factors, such as Mobile App, it leverages existing mobile devices to help us to help you solve even more business challenges relating to the security of, and access to, your data.

Business Benefits:

Maximise Security
Using our Mobile App. as a 2nd factor for authentication adds an important extra level of security to protect your virtual perimeter from being breached.

Ease of Use
The Mobile App. can be configured in a variety of ways to meet your exact requirements and unique business challenges. Options include the innovative OneTouch PUSH Authentication which allows for a fast and simple work flow by authenticating with one press of a button.

Rapidly Scalable and Cost Effective
Allows an easy and rapid deployment to the user base, utilising existing mobile phones and saving on IT management costs. Using mobile phones allows the business to capitalise on an existing investment, and reduces the cost or need for traditional, physical proprietary tokens.

Affordability
Free to download and there are no additional ongoing charges, other than those associated with normal data access.

Increased Productivity
The App. generates an OTC on demand, and works with or without network coverage. No need for a network connection to provide authentication and access.

Key Features:

OneTouch PUSH Authentication
Choose to authenticate quickly and easily with our PUSH based option; a notification message appears on the users mobile asking them to accept or reject the authentication by the simple press of a button, no codes required, simple, fast and secure.

Supported Modes
Online and offline OTC's generated, and OTC codes can be protected by a PIN number.

Simple Management
The Mobile App. provides direct access to your support desk via email or phone call.

Enhanced Security
Users are required to enter a PIN number to gain the OTC from the app for heightened security. Where simple workflow dictates otherwise the app can present the OTC ready for use on opening.

Easy to Deploy
Easy to configure App. After it is downloaded, simply scan a uniquely generated QR code with the built in scanner, or by clicking on a provision message sent by SMS or email.

Policy Controlled OTC length
Whilst a 6 digit OTC is typically used, a range of code lengths can be set during configuration.

Multiple Platform Support
Our Mobile App. supports all the mobile platforms, iOS, Android, Windows Mobile and BlackBerry.

Swivel Secure is a pioneering network security solutions provider. Our authentication platform is recognised as a leading standard in authentication technology and is the solution of choice for prominent global organisations.

Offering a wide range of authentication options, the Swivel Secure platform delivers two-factor authentication via Mobile Apps, SMS, OATH Tokens, Telephony and Strong authentication through integrated in-browser imagery.
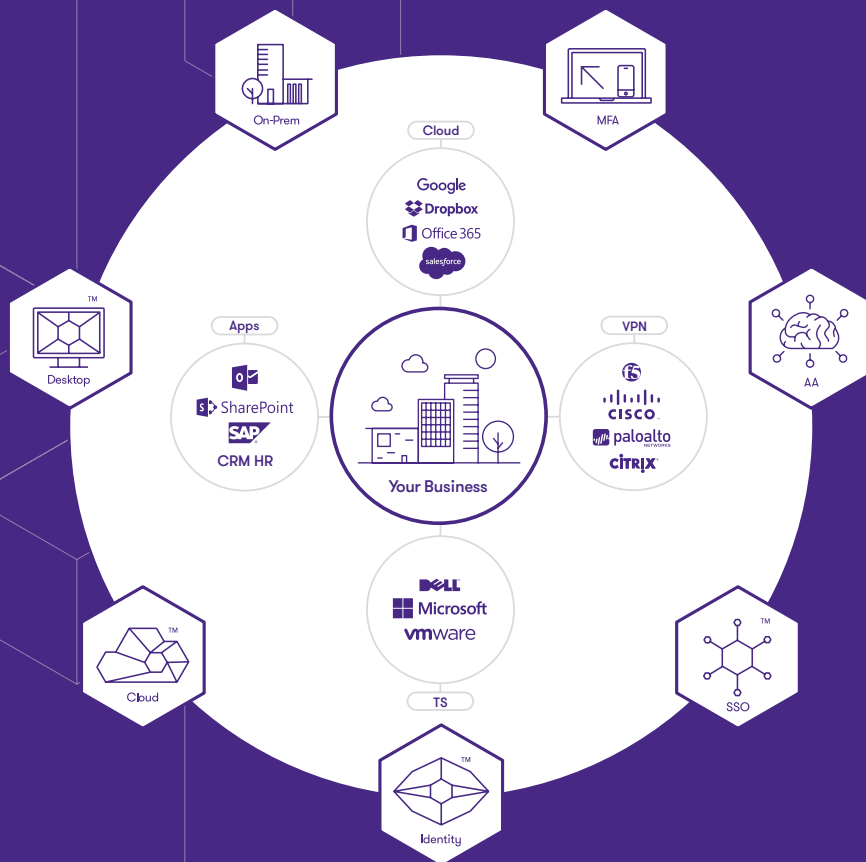

Functions

- Multi-Factor Authentication
- Single Sign-On
- Federation
- Adaptive Authentication

Standards

- RADIUS
- SAML
- ADFS
- OATH

Deployment

- On premise
- HA configuration
- Hybrid
- Cloud

Features

- User Self-Help
- Low management costs
- Flexible Licensing
- 24 x 7 Support available
