

Our award winning authentication solution protects access to all of your data whether on-premise or in the Cloud. Choice is everything and, despite modern authentication options, the hardware token has not yet seen its day. It remains the most tried and trusted solution for when tokenless authentication is not suitable, and can be combined with others factors to ensure the security of, and access to, your data.

Business Benefits:

Reliable Security

Authenticate wherever, whenever. Physical tokens don't require charging, a phone signal or any data coverage, so access for legitimate users is seamless.

Managed Costs

Physical tokens have a fixed cost; no variable extras or usage based costs from 3rd party management software (MDM), so no surprises.

Cost Effective

Our tokens are very affordable, and a fraction of the price of similar tokens provided by RSA.

Ease of Use

Whilst our mobile app, or SMS service is very user friendly, for sheer simplicity the hardware token is tough to beat. Simply pick it up, press the button and read the OTC shown on screen.

Key Features:

Dedicated Device

Our token does one job, and one job only; provides an OTC when the user requires secure access.

Open Standards

The Swivel Secure Token is an OATH token, and therefore not propriety or locked to the Swivel Secure solution.

Compatibility

Works with our competitively priced Swivel Secure Tokens and if required with any OATH token you may already have, providing the serial and seed codes are available.

Protocol Support

Our OATH support covers all types of token protocols; TOTP, HOTP, and OCRA.

Transaction Signing

By using our OATH token, with support for OCRA, AuthControl Sentry can provide secure transaction signing and PIN entry on the physical token.

Battery Life

Long lasting token batteries. We promise to trade any tokens that stop working within the first 4 years, simply return them to Swivel Secure for an immediate free replacement.

Mix and Match

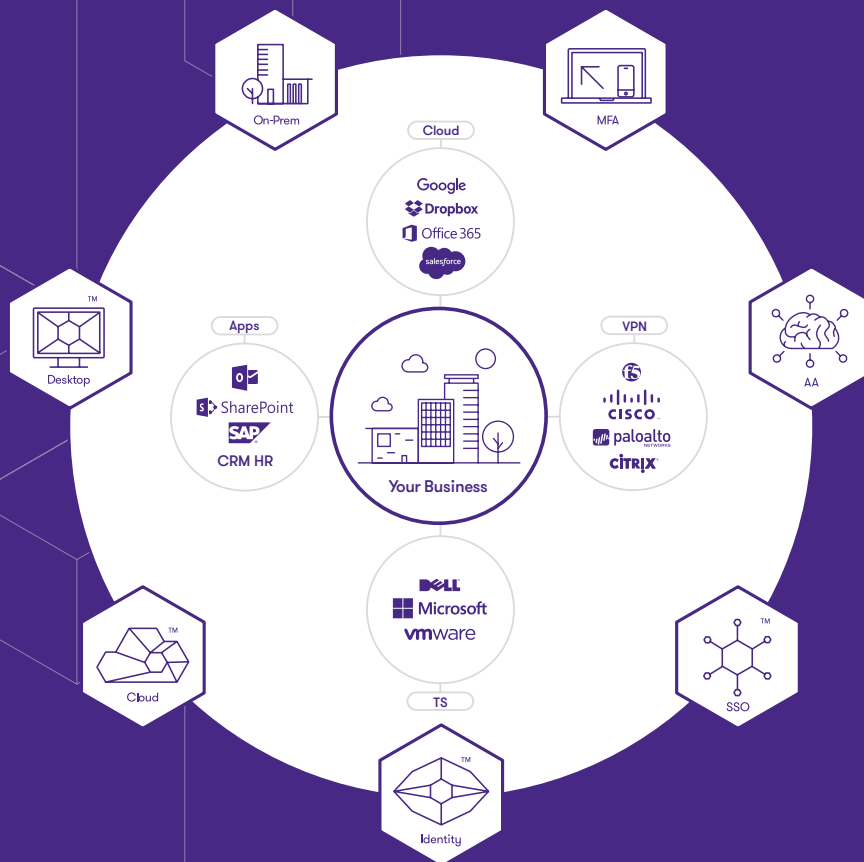

Tokens can be combined with any of our more modern authentication factors to provide a tailor made authentication solution that meets your business and user needs; we can help assess the best solution based upon your organisation, work methods, your data and your systems.

Branding

Each of your employees is a brand ambassador so you have the option to customise tokens with your logo; on orders of 1,000 tokens or more.

Swivel Secure is a pioneering network security solutions provider. Our authentication platform is recognised as a leading standard in authentication technology and is the solution of choice for prominent global organisations.

Offering a wide range of authentication options, the Swivel Secure platform delivers two-factor authentication via Mobile Apps, SMS, OATH Tokens, Telephony and Strong authentication through integrated in-browser imagery.

Functions

- Multi-Factor Authentication
- Single Sign-On
- Federation
- Adaptive Authentication

Deployment

- On premise
- HA configuration
- Hybrid
- Cloud

Standards

- RADIUS
- SAML
- ADFS
- OATH

Features

- User Self-Help
- Low management costs
- Flexible Licensing
- 24 x 7 Support available
