

Our award winning authentication solution, with a long track record, and proven ability, to provide a varied and dynamic solution to your authentication needs. Trusted by leading global organisations to protect their virtual perimeter. Our on-premise and Cloud solutions take authentication beyond a simple OTC challenge, and use adaptive authentication to decide if and how a user should be authenticated.

Business Benefits:

Usability

Gives an optimal user experience whilst enforcing strict security policies. Swivel Secure's Unified Access approach simplifies the sign-on process by being the single source of access for your enterprise. Any attempt to access a VPN, Cloud or local application will cause the user to be automatically directed to the Unified Sign-on portal.

Productivity

Single efficient authentication portal for all your applications. Users waste less time on authenticating in multiple instances and can get straight to work, whatever they need to access and help-desk time is saved also.

Cost Saving

With around 50% of help-desk calls being password related, Unified Access significantly reduces IT management costs and time. With an increasing number of services, users have a wide variety of systems to login to, and businesses have a high level of maintenance in order to maintain compatibility and upgrades.

Highly Secure

Reduces the likelihood that employees will use simple passwords because of the need to have so many. In addition, Unified Access means it is easy to track usage and mark privileges as to where and how credentials are used as well as creating an audit trail in the event of an internal data breach.

Easy to Manage

Securing access to multiple services, via a VPN, Cloud, or hosted locally, requires management and integration with a wide variety of technologies. Our unified approach means validation to all of these goes through a single authentication portal.

Key Features:

Adaptive Login

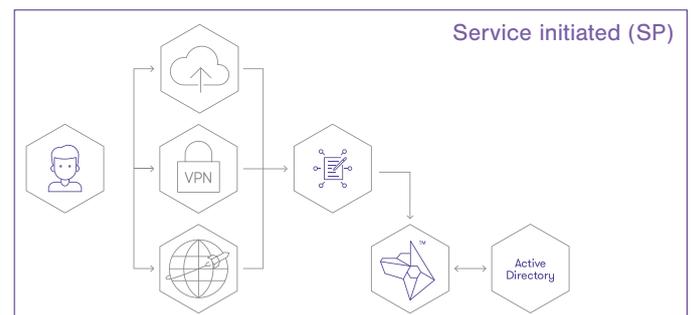

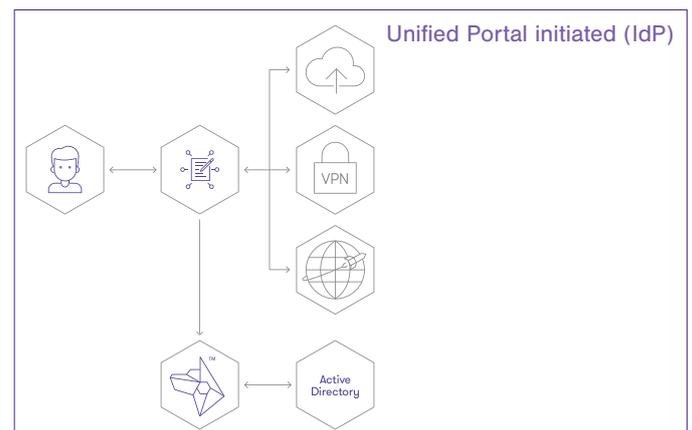

If a user has already authenticated once during the day, the policy settings can be configured to allow subsequent access via username and password only.

Simplified Training

Having a standard login portal and process, means that once a user knows how to access one service, they know how to access any provided service.

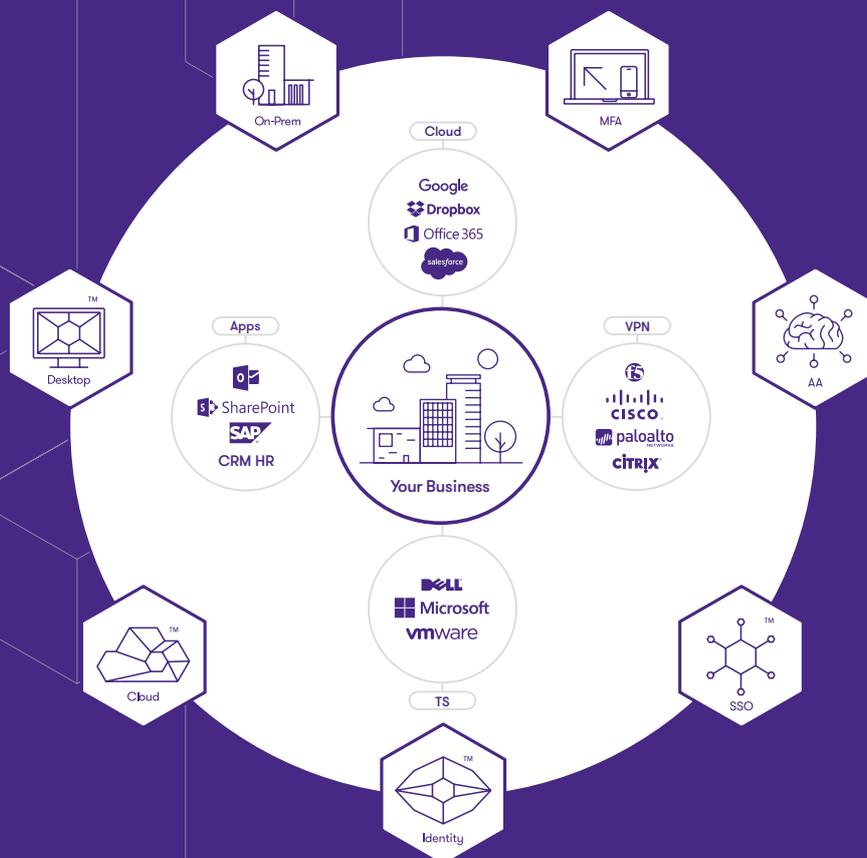

Changing Requirements

The world we work in is not fixed, our requirements and needs change and evolve. The unified portal gives a single place to challenge a user. So if a particular service has a new requirement for 2FA the portal will enable that, without having to specifically integrate to the actual service or VPN directly.

Swivel Secure is a pioneering network security solutions provider. Our authentication platform is recognised as a leading standard in authentication technology and is the solution of choice for prominent global organisations.

Offering a wide range of authentication options, the Swivel Secure platform delivers two-factor authentication via Mobile Apps, SMS, OATH Tokens, Telephony and Strong authentication through integrated in-browser imagery.

Functions

- Multi-Factor Authentication
- Single Sign-On
- Federation
- Adaptive Authentication

Deployment

- On premise
- HA configuration
- Hybrid
- Cloud

Standards

- RADIUS
- SAML
- ADFS
- OATH

Features

- User Self-Help
- Low management costs
- Flexible Licensing
- 24 x 7 Support available
